- **Ameren's All-In Safety Culture**

Speaker: Jason Wernex, Ameren

As we progress from a rules-based to a values-based safety approach, our focus is on enhancing culture and co-worker engagement. To eliminate life-changing events at Ameren, we must shift our focus beyond the regulatory minimums. There are more hazards than can be mitigated with rules alone. Our strategy is to educate and empower co-workers to make good decisions at the right time. Safety is a sustainable value that can never be compromised and is integrated in everything we do across the enterprise.

- **Safety products -**

Table top vendors will provide short presentations discussing the benefits and/or features of a safety-related product. During the breaks, attendees can visit their table tops to seek more information on these products.

- **Emergency Preparedness**

Speaker: Melba R. Moore, MS, CPHA,

Commissioner of Health for the City of St. Louis Department of Public Health

The City of St. Louis Department of Health works diligently to build capacity for a robust response to emergencies and disasters. This presentation gives a brief description of our emergency preparedness activities. Partnering with the private sector and business community plays an important role in building resiliency -- so that when emergencies and disasters occur, our response activities are much more effective.

- **The Hidden Costs of Ergonomics**

Speaker: Jacob Thomas, Greenlee-Textron

This seminar explores how poor ergonomics damages the human body, the injuries that result, and the hidden costs of those injuries. Will cover some basic muscle health and what the recovery process looks like to illustrate where the high costs come from with these injuries.

- **Lightning Protection for Facilities**

Speaker: Phil Wentz, McClure Engineering

What is lightning protection and what does it protect? Do I need it? How do I get lightning protection installed on my facility? Are there design issues I should pay attention to? Maintenance issues?

- **The Electrical Safety Program - Your best tool to implement the new 2018 NFPA 70E.**

Speaker: Dave Ritter, Ritter Safety and Facilities Support

One of the most valuable, but underutilized tools in Arc Flash Safety and NFPA 70E Compliance is a detailed and customized Electrical Safety Program (ESP). The 2018 Edition of NFPA 70E adds greater emphasis on the ESP, in addition to new requirements. A quality program will allow employees to efficiently incorporate safe electrical work practices into their daily routines. Learn how to use your company's Electrical Safety Program to increase cooperation, accountability and reduce risk.
